Guide bushings DIN 9831/ISO 9448

Standardized outside diameter

Advantage: Reciprocal interchangeability

Steel sliding guide bronze plated

Interchangeability of all guide bushings

For each bore, you can use:

Two different inside diameters, for example 30/32

Seven different types of guidance, for example: three sliding guide and four ball guide types

Three different bushing types, for example: shoulder, flange or smooth bushings

Three different bushing lengths (for inside diameters from 19 to 80)

Therefore, it is possible to use $2 \times 7 \times 3 \times 3 = 126$ different guide bushings for each bore.

Ball guide brass

Sliding guide with solid lubricant bands

Ball guide plastic

Fields of Application:

Steinel precision guide units can be utilized in the manufacture of tools, fixtures, machines, measuring instruments, medical devices and automobiles. They are characterized by their high load capacity and resistance to wear.

Roller guide

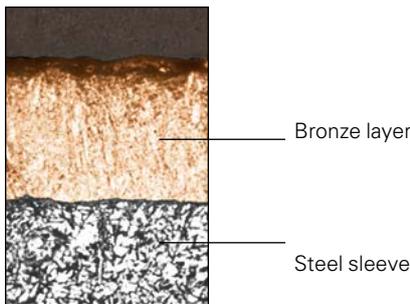

Advantages:

Due to the standardized outside diameter, all guide bushings are interchangeable. A die set with a sliding guide can be changed to using a ball or roller guide without any additional work, simply by exchanging the guide bushings.

Steinel precision sliding guides

steel bronze plated or with solid lubricant

Steel sliding guide bronze plated

Fields of application

Steinel precision sliding guides "steel bronze plated" or with "solid lubricant" are used for longitudinal motion in the manufacture of tools, fixtures, machines, medical devices and automobiles. They are characterized by their high load capacity and resistance to wear.

Component arrangement

The Steinel precision sliding guide "steel bronze plated" or with "solid lubricant" is composed of a guide pillar and guide bushing with honed clearance.

Bronze plating

The hardened steel sleeve absorbs strong lateral forces and prevents the guide bushing from deforming when it is being compressed strongly across its edges. The galvanized bronze plating is very hard, wear-resistant and honed to highest surface finish quality. In addition to its excellent long running wear factor it also has very good heat dissipation characteristics that ensures the rapid disbursement of excessive frictional heat.

Lubrication

All Steinel precision sliding guides "steel bronze plated" are supplied with an internal lubrication system, where the parallel lubrication rills across the grooves are connected with axial channels. As a result, an equal distance to all lubrication points is ensured. At the same time, the internal lubrication system guarantees a shielding effect against dirt. The internal lubrication system must be supplied with high-quality oil or high-quality grease several times a day, depending on sliding speed.

Sliding speed

The recommended sliding speed is 15 – 30 m/min.

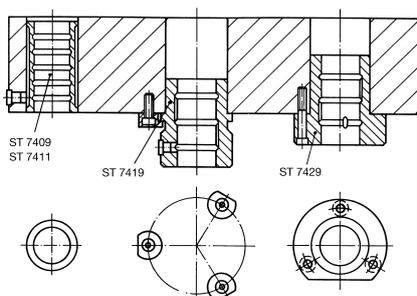

Under ideal conditions of lubrication, guide clearance, stroke length, radial load and heat dissipation, very high stroke speeds of 600 – 800 strokes/min. can be achieved with the Steinel precision sliding guide "steel bronze plated".

Guide clearance

The guide bushings are precision turned and honed. An additional compression of the sliding surface takes place at the tool start-up, resulting in better sliding characteristics. The clearance is 2 – 7 µm.

If more clearance is required, please indicate it on the order as "honed for easy slide fit".

The guide bushings ST 7419 and ST 7429 have an M 8 x 1 threaded hole that enables them to be connected to a central lubrication system.

Sliding guide with solid lubricant

Maintenance-free guide bushings

As a result of the moving parts, the solid lubricant produces a tightly clinging, consistent lubrication film between the guiding elements. This film also adheres to the surfaces when the parts are not moving or when they first start moving, which prevents corrosion between the guide bushing and guide pillar. Our lubricant and maintenance free guide bushings are complex, highly wear-resistant slide elements of the highest precision. Even after long continual use, our guide bushings do not undergo any deformation due to the long-enduring strength of the fundamental materials.

Lubrication

The solid lubricant construction, the particles of the solid lubricant have a low shearing resistance in their crystalline structure. They are between two surfaces and take over the lubricating function.

Sliding speed

The maximum sliding speed is 30 m/min.

Under ideal conditions of guide clearance, stroke length, radial load and heat dissipation stroke speeds of 300 – 400 strokes/min. can be achieved with the Steinel precision sliding guide with solid lubricant.

Guide clearance

The clearance is 2 – 7 µm. If more clearance is required, please indicate it on the order as "honed for easy slide fit".

Sliding guide with solid lubricant bands

Steinel precision guides

Ball guides

Special features of Steinel precision ball guides

- **Precision** due to the microfinished contact surfaces and uniformly selected precision steel balls.

- **Friction-free movement** due to the rolling motion of the balls.

Clearance-free guidance due to the optimal preloaded rolling motion of the balls between the guide pillar and guide bushing.

- **Long lifespan** due to the free-wheeling mounting and helical positioning of the balls, so that each ball has its own track.

- **High-load capacities, precision guidance and high stroke speeds** are achieved due to the highest precision of the uniformly selected precision steel balls, honed guide bushings and superfine ground guide pillars. The large number of balls in the cage as well as an even force distribution in the guidance system allow high stroke speeds of 30 – 40 m/min and more.

- **Interchangeability** is ensured due to the uniformly selected precision steel balls.

- **Special designs** can be manufactured according to your drawings.

Loading capacities

Guide pillar diameter d_1	Ball diameter d_k	F (stat.) in N/cm carrying guide length
10/12	2	450
15/16	3	580
19/20	3	800
24/25	3	950
30/32	4	1350
38/40	4	1900
48/50	4	2400
60/63	5	3000
80	6	3300

Load capacities — preload

The radial load capacity of the ball guide grows with the increasing preload while simultaneously decreasing the friction-free movement. Extremely high preloading will overstrain the ball guide due to the excessive surface pressure on the balls.

The preload in a paired ball depends on the guide diameter:

- von $\varnothing 10 - 12 = 3 - 5 \mu\text{m}$
- von $\varnothing 15 - 20 = 4 - 6 \mu\text{m}$
- von $\varnothing 24 - 32 = 6 - 9 \mu\text{m}$
- von $\varnothing 38 - 50 = 9 - 12 \mu\text{m}$
- von $\varnothing 60 - 80 = 11 - 14 \mu\text{m}$

Ball cage with safety part and screw

Special characteristic: guide pillars mounted in the upper plate and the possibility for the ball cage to come completely out of the guide bushing.

Limiting sleeve

Special characteristic: Prevents the ball cage from shifting down.

Low maintenance is needed for the practically maintenance-free ball guides. Lubrication with a high-performance grease when mounting is sufficient for continuous operation.

Component arrangement and function

The Steinel precision ball guide is composed of a guide pillar, guide bushing and ball cage, which are tensionally paired by preloading.

Due to the tensional structure of the balls within the cage, the ball cage only travels at half the speed of the ball guide motion. The travel length of the ball cage is always half of the stroke of the guide bushing or the guide pillar.

Fields of application

Steinel precision ball guides are used for longitudinal and rotary motion in the manufacture of tools, fixtures, machines, measuring instruments, medical devices and automobiles.

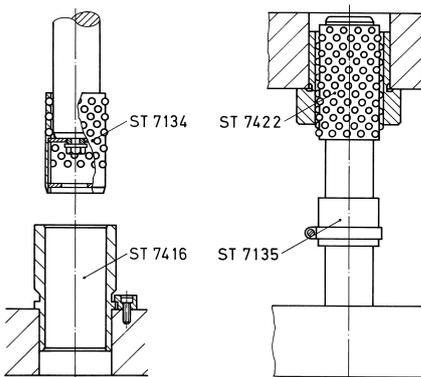

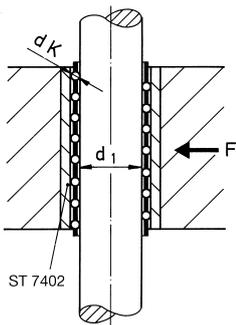

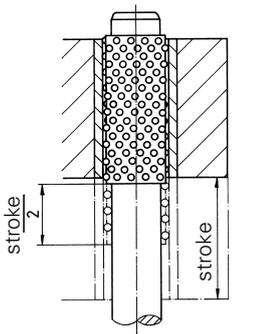

aluminium ball cages are distinguished by having less mass than compared to brass. Since the only function of the cage is to act as a carrier, every bit of weight reduction means reduced energy loss with the same stability of the cage, especially at the return of the stroke.

Brass ball cages can be used universally. They have a high mechanical strength, superior sliding properties as well as a high wear resistance and stability. Due to their high-temperature strength, they are suitable for temperatures over 80 °C. Their sturdiness makes them ideal for use in machines and tools with high precision demands.

Plastic ball cages are distinguished by having less mass than compared to other materials. They are used where high stroke speeds are reached. The plastic is also suitable for use in aggressive surroundings.

Steinel precision guides

Roller guides

Special features of the Steinel precision roller guides

Precision due to the microfinished contact surfaces and uniformly selected precision profile rollers.

Friction-free movement due to the rolling motion of the rollers.

Clearance free guidance due to the optimal preloaded rolling motion of the profile rollers between the guide pillar and guide bushing.

Long lifespan due to the free-wheeling mounting and helical positioning of the profile rollers, so that each roller has its own track.

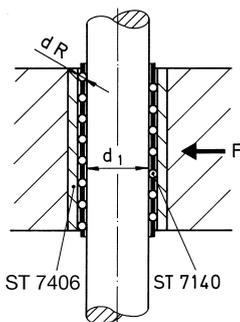

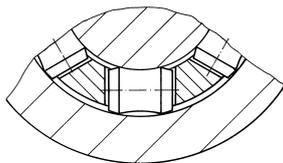

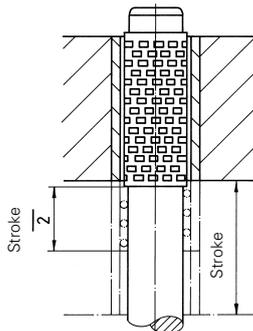

Fields of application

Steinel precision roller guides are used for longitudinal motion in the manufacture of tools, fixtures, machines, measuring instruments, medical devices and automobiles. Rotary motion is not possible!

Component arrangement and function

The Steinel precision roller guide is composed of a guide pillar, guide bushing and roller cage, which are tensionally paired by preloading.

Due to the tensional structure of the rollers within the cage, the roller cage only travels at half the speed of the roller guide motion. The travel length of the roller cage is always half of the stroke of the guide bushing or the guide pillar.

Load capabilities — preload:

The radial load capability of the roller guide grows with the increasing preload while simultaneously decreasing the friction-free movement.

Extremely high preloading will overstrain the roller guide due to the excessive surface pressure on the rollers.

The preload in a paired roller guide depends on the guide pillar diameter:
 from $\varnothing 19 - 20 = 2 - 4 \mu\text{m}$
 from $\varnothing 24 - 32 = 4 - 5 \mu\text{m}$
 from $\varnothing 38 - 50 = 5 - 7 \mu\text{m}$
 from $\varnothing 60 - 80 = 7 - 9 \mu\text{m}$

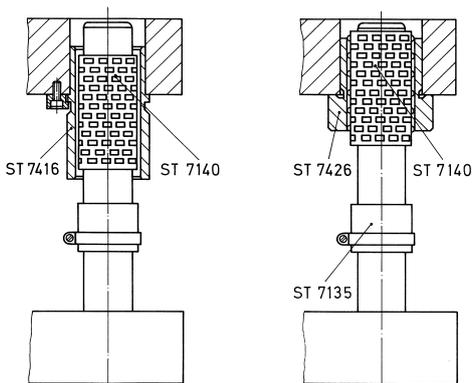

Limiting sleeve

Special characteristic:
Prevents the ball cage from shifting down

Stroke speeds

With optimal use, the stroke speeds can reach up to 40m/min and more.

Aluminium roller cages are distinguished by having less mass than compared to other materials. Since the only function of the cage is to act as a carrier, every bit of weight reduction means reduced energy loss with the same stability of the cage, especially at the return of the stroke.

Due to the large stroke movements, an unwanted slipping effect of the roller cage will be considerably reduced by the aluminium cage, thus extending the working life of the guide.

Low maintenance is needed for the practically maintenance-free roller guides. Lubrication with a high-performance grease when mounting is sufficient for continuous operation.

A profile roller can absorb six times the load of the same-sized ball before it will begin to deform.

The contact radii of the roller's saddle shape are manufactured in such a way that critical loadings on the edge area will be avoided, which results in an extended life of the roller cage.

The bending as a result of the load in the middle surface to the outer track will result in a deflection below $0.05 \mu\text{m}$, which can be neglected.

The relatively higher costs compared to the standard ball guide will be more than compensated by the superior performance achieved.

Loading capacities

Guide pillar diameter d_1	Roller diameter dR	F (stat.) in N/cm per roller cage
19/20	3	1700
24/25	3	2250
30/32	4	3450
38/40	4	4700
48/50	4	4700
60/63	5	5900
80	6	8750

High-load capacities, precision guidance and high stroke speeds are achieved due to the highest precision of the uniformly selected profile rollers, honed guide bushings and superfine ground guide pillars. The large number of supporting rollers in the running surface as well as an even force distribution in the guidance system allow high stroke speeds.

Interchangeability is ensured due to the uniformly selected precision profile rollers.

Special designs can be manufactured according to your drawings.

Guide pillars ST 7190

Mini-series

STEINEL[®]
NORMALIEN

Material:

Ø d 3 – 6 mm steel 1.2379 hardened, hardness 60+3 HRC

from Ø d 8 mm steel, 1.7131 induction hardened, depth of hardening 0,8 – 1,2 mm, depends on Ø, hardness 60 – 64 HRC

Steinel-guide pillars are ground on all sides. The guide diameter is super-fine ground finish and lapped to tolerance ISO h3. Mount into mounting holes ISO P6.

Ball bearings – Mini series

Steinel ball-bearings are distinguished by exceptional precision and friction-free movement. There for they find a wide acceptance as a construction element for electrical and optical measuring instruments and measuring systems. They will be used successfully in machines, instruments and technical equipment of high precision.

Special features of Steinel precision ball guides

- **Friction-free movement** due to the roll motion.
- **Zero clearance guiding** is achieved due to the precision preloaded rolling motion on the balls between guide pillar and bush.
- **Interchangeability** will be achieved by uniformly selected steel balls.
- **Special designs** can be manufactured according to your drawing.

Guide bushes ST 7191

Mini-series

Material:

steel 1.3505 (100 Cr 6) hardened,
hardness 61 – 63 HRC

Order example: Guide bush **ST 7191**

$d_1 = 8, l = 30$ mm

Add **08 x 030**

Order number **ST 7191.08 x 30**

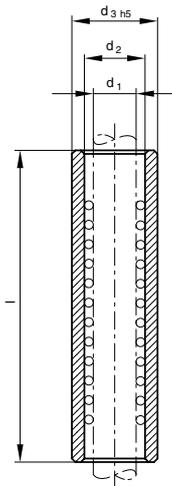

Explanation:

Steinel-guide bushes are ground on all sides.
The guide diameter (bore) is super-fine honed
and will be matched with the pillar to ensure
an optimal preload.

Mounting instructions:

If possible avoid press fit. Fit in tensionfree
into the mounting bore hole ISO H6 and
secure it with glue.

Guide pillars ST 7100

precision ground for press fitting

STEINEL®
NORMALIEN

DIN 9825, ISO 9182

Material:

Steel 1.11221 (Ck60) induction hardened,
hardness 62-64 HRC

Guide diameter ISO h3 superfinish ground
and microfinished mounting into mounting-
holes ISO
R6 Starting at sheet thickness 50 mm N6

Application: Due to the high precision of the
guide pillars ST 7100 they are suitable to all
Steinel guide bushes for sliding, ball and roller
guides.

Upon request also available grooved for holding
ring. Please add part number description
"with groove and holding ring ST 7105" to
your order.

Guide pillars ST 7106

precision ground for press fitting with internal thread

STEINEL®
NORMALIEN

Similar to DIN 9825/ISO 9182

Material:

Steel 1.11221 (Ck 60) induction hardened,
hardness 62-64 HRC

Guide diameter ISO h3 superfinish ground
and microfinished mounting into mounting-
holes ISO R6
Starting at sheet thickness 50 mm N6

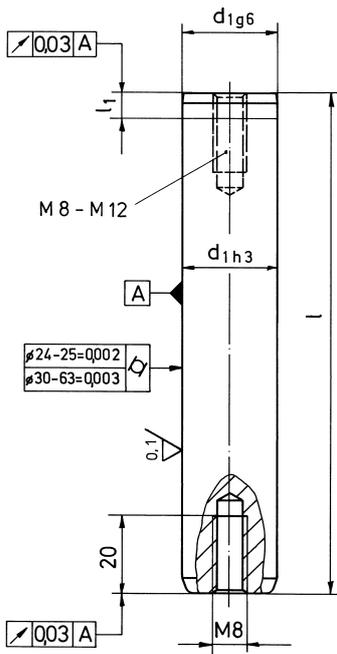

Application: Due to the high precision of the
guide pillars ST 7106 they are suitable to all
Steinel guide bushes for sliding, ball and roller
guides. Especially in connection with ball
cages ST 7134.

Order example: Guide pillar **ST 7108**

$d_1 = 25, l = 180$ mm

Add **25 x 180**

Order number **ST 7108.25 x 180**

Max. lengths	400	500	400	750	1000	1000	1200	1500

Mounting of the guide pillars

Before inserting the pillars into the upper plate, clean the holes thoroughly and oil lightly (no grease). Do the same with the holes in the lower plate. Put parallel bars between upper and lower plate. Drive the pillars about 3 mm into the lower plate (use rubber mallet). Complete the press fit of the pillars using a hydraulic or hand screw press (once pillar fit ISO h3 and hole fit ISO R6 is achieved the press fit is guaranteed).

Thread mold side

- Ø 19 – 32 = M 8
- Ø 38 – 50 = M 10
- Ø 60 – 80 = M 12

Disassembly of the guide pillars

Always press out towards the top of the lower plate, never press out towards the bottom, because the high surface quality could then be destroyed.

Guide pillars ST 7117

with middle mount shoulder

STEINEL®
NORMALIEN

Material:

steel 1.1221 (Ck 60) induction hardened,
hardness 62 – 64 HRC

Guide diameter ISO h3
super-fine ground finish
Mounting diameter ISO js4
Mount into mounting hole ISO H6

Order example: Guide pillar **ST 7117**

with middle mount shoulder
 $d_1 = 25$, $l_1 = 110$ mm, $l_2 = 90$ mm
Add **25 x 110 x 090**

Order number **ST 7117.25 x 110 x 090**

Application:

Guide pillars with middle mount shoulder are matchable to all Steinel guide bushes for sliding and ball guides.

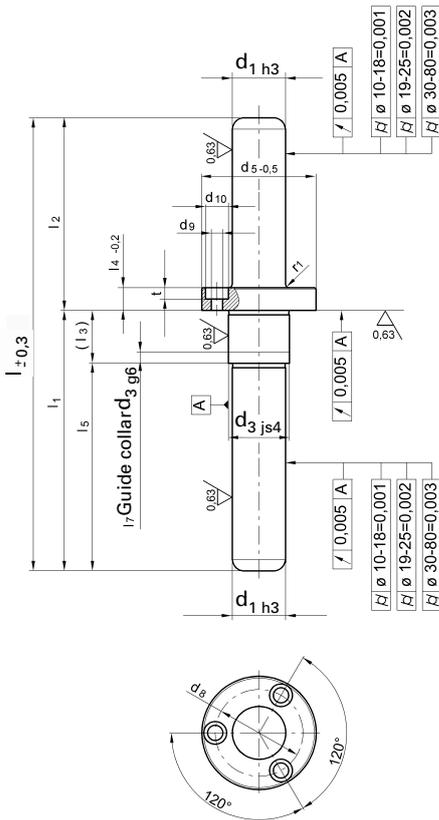

The pillars with middle mount shoulder improve the side load capacity of tools using guide plate.

Beginning with column diameter 32, columns will have a hollow bore hole to reduce the weight of the guide plate to which the columns are fastened. This reduces the weight of the mass put in motion.

Intermediate sizes can be delivered on short notice

Guide pillars ST 7118

with small middle mount shoulder

Material:

steel 1.1221 (Ck 60) induction hardened,
hardness 62 – 64 HRC

Guide diameter ISO h3
super-fine ground finish
Mounting diameter ISO js4
Mount into mounting hole ISO H6

Guide pillars with small middle mount
Shoulder are secured with three holding
clamps ST 7367 (included).

Order example: Guide pillar **ST 7118**

with middle mount shoulder

d1 = 25, l₁ = 110 mm, l₂ = 90 mm

Add **25 x 110 x 090**

Order number **ST 7118.25 x 110 x 090**

Application:

Guide pillars with middle mount shoulder are matchable to all Steinel guide bushes for sliding and ball guides.

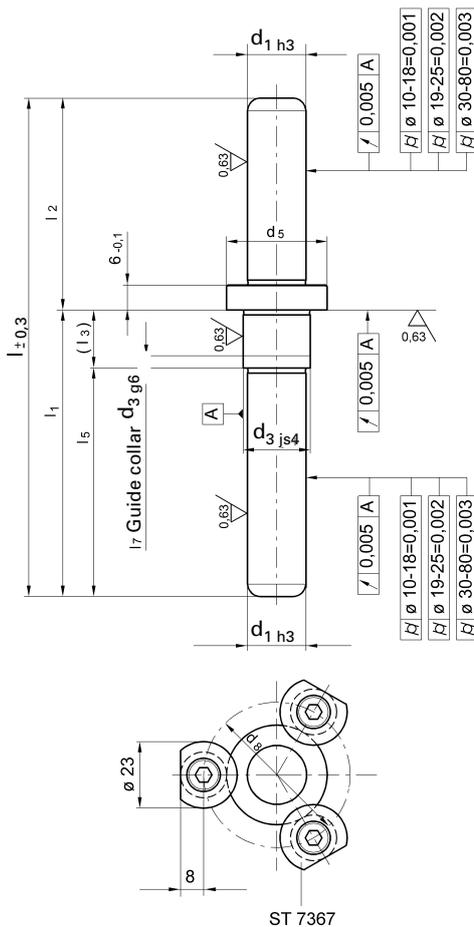

The pillars with middle mount shoulder improve the side load capacity of tools using guide plate.

Beginning with column diameter 32, columns will have a hollow bore hole to reduce the weight of the guide plate to which the columns are fastened. This reduces the weight of the mass put in motion.

Guide pillars ST 7120, ST 7126

with shoulder

STEINEL
NORMALIEN

ST 7120

ST 7126

DIN 9825/ISO 9182

Made of solid material

Material:

Steel 1.11221 (Ck 60) induction hardened,
hardness 62-64 HRC

Guide diameter ISO h3

super-fine ground finish

Mounting diameter ISO js4

Mounting into mounting holes ISO H6

Guide pillars with shoulder enable an easy and quick assembly and disassembly of the pillars, as for example in the case where you wish to sharpen cutting tools with a surface grinder.

Guide pillars with shoulder are secured with three holding clamps ST 7367 (included).

(Fig. 1)

Alternative the guide pillars can be fixed with the holding disc **(Fig. 2)** ST 7387 (order separately).

Application: Guide pillars with shoulder are suitable to all Steinel guide bushes for sliding, ball and roller guides.

Order example: Guide pillar **ST 7120** with shoulder

$d_1 = 19$, $l_3 = 140$ mm, $l = 163$ mm

Add **19 x 140 x 163**

Order number **ST 7120.19 x 140 x 163**

Order example: Guide pillar **ST 7126** with shoulder and 2 internal threads

$d_1 = 24$, $l_3 = 200$ mm, $l = 227$ mm

Add **24 x 200 x 227**

Order number **ST 7126.24 x 200 x 227**

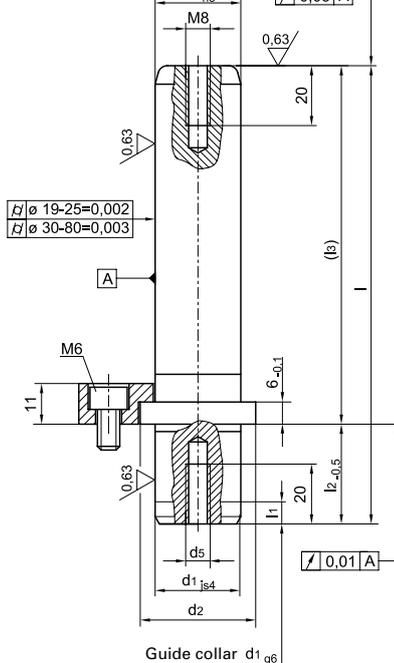

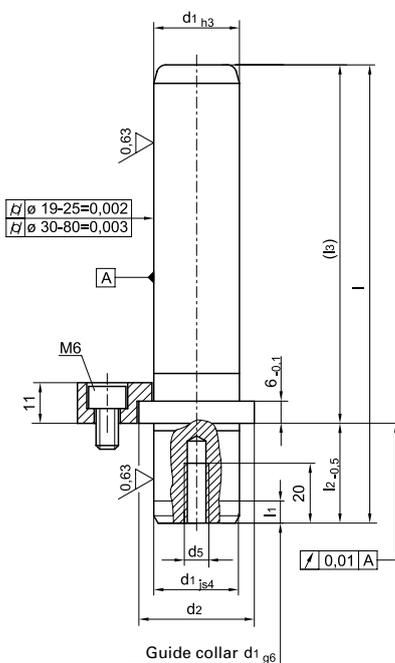

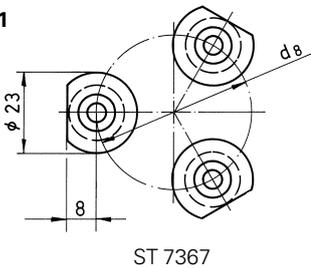

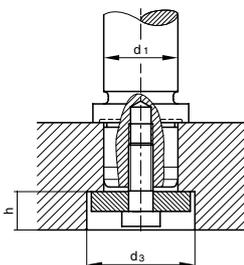

Fig. 1

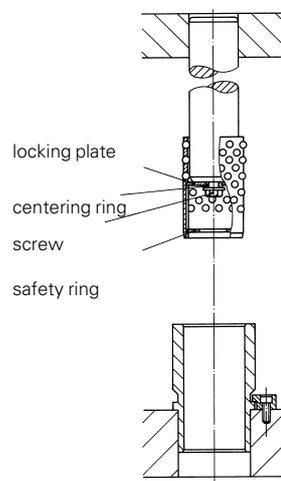

ST 7367

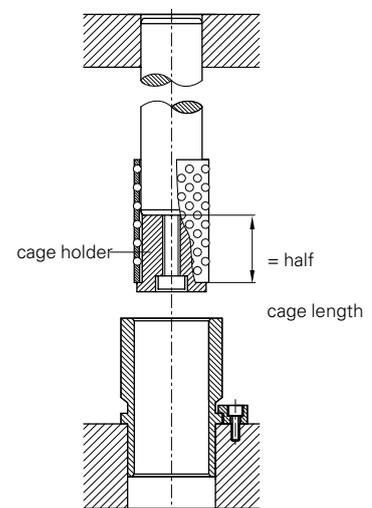

Fig. 2

ST 7387

Example of application for guide pillars ST 7126 with thread on the guide side 24 mm to 63 mm.

Example of application for all guide pillars

Quick-change guide pillars ST 7181

with disc and screw

STEINEL®
NORMALIEN

DIN 9825/ISO 9182

Material: steel 1.1221 (Ck 60)
induction hardened, hardness 62 – 64 HRC

Guide diameter ISO h3 super-fine ground finish, taper shank ground, complete with disc SZ 7368 and cylindrical screw with hexagonal recessed hole SZ 8512.

Application: Quick-change guide pillars with taper shank enable a quick exchange of pillars. Where the pillars often have to be removed in order to sharpen the die, the working time of the tool make is drastically reduced by the use of quick-change guide pillars.

The hardened and precision ground taper of the guide pillar guarantees the perfect re-mounting into the same position. Mismatch and angle error are not occurring.

The light taper in connection with disc and screw ensure the absolutely fixe chucking of the pillars.

Quick-change guide pillars are suitable to all Steinel guide bushes for slide, ball and roller guide. Upon request all Steinel die-sets can be furnished with quick-change guide pillars and holding bushings.

Matching holding bushes: ST 7182

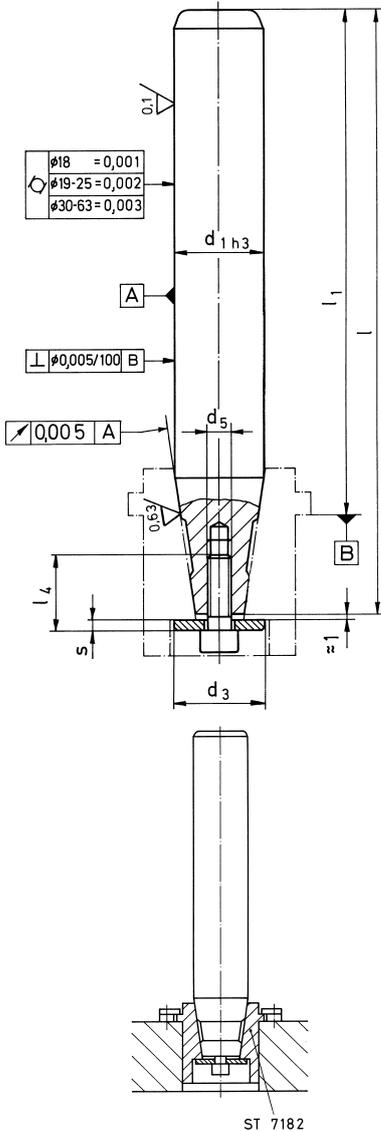

Order example:

Pillar holding bushes ST 7182

with holding clamps

DIN 9825/ISO 9182

Material:

steel 1.7131 (16 Mn Cr 5) case hardened,
hardness 58 – 60 HRC
inside taper ground
mounting diameter ISO j6, ground
Suitable to quick-change guide pillars ST 7181

Mounting instructions:

Mount into mounting hole ISO H6, secured
with 3 holding clamps ST 7367 (included).
Mounting diameter d_3 corresponds with
diameter of guide bushes with flange ST 742,
and with shoulder ST 741.
Advantage: same mounting holes in all plates.

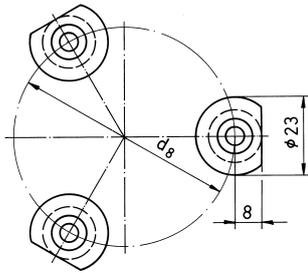

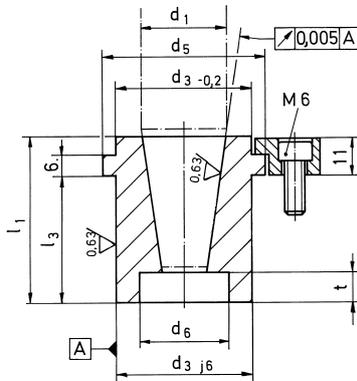

Holding clamps:

when reordering the holding clamps,
please indicate 1 set = 3 pieces

Guide bushes ST 746.

sliding guide, for large tools

DIN 9834/ISO 9448

Technical description:

Guide diameter ISO H7 precision turned
Mounting diameter ISO h6 ground

ST 7460 solid bronze:

for usual load, good lubrication is necessary

ST 7469 steel, bronze plated:

steel 1.7131 (16 Mn Cr 5)
induction hardened, hardness 61-63 HRC
sliding surface bronze plated
Due to the galvanic bronze plating on the hardened steel jacket this bush qualifies especially for high sliding speeds and extreme lateral forces. Good lubrication is necessary.

Mounting instructions:

Adjust in mounting bore hole ISO H7.
Fix with 2 holding clamps ST 7377 (not included in delivery). The shoulder surface, right-angled ground to the guide bore, will be squeezed onto the plate by the holding clamps and guarantees an absolutely rigid clamping of the guide bush.

Matching guide pillars:

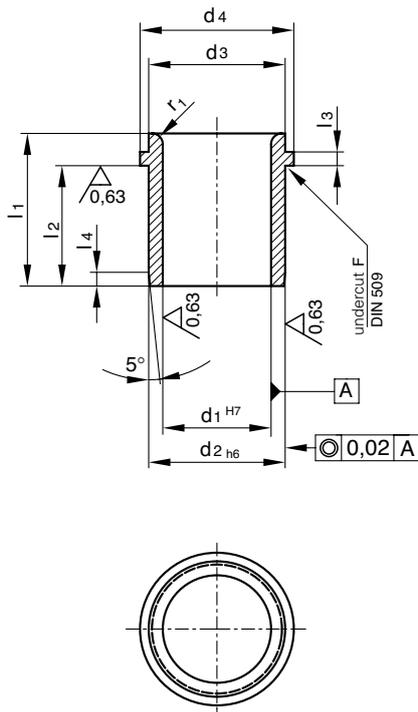

ST 7160

Order example: Guide bush **ST 7469**

$d_1 = 32$ mm

Add **032**

Order number **ST 7469.032**

Ø 80 and 100

Guide bushes ST 9831

smooth, sliding guide with solid lubricant

Material:

Solid bronze with solid lubricant

Due to the solid lubricant inserts, the sliding guide is self-lubricating and suitable for higher loads.

Guide diameter ISO H6, precision turned
Mounting diameter ISO j6, precision turned

Matching guide pillars: ST 7100,
ST 7106, ST 7107, ST 7108, ST 7117,
ST 7118, ST 7120, ST 7126, ST 7127,
ST 7128, ST 7181/82 and ST 9825

Mounting instructions:

1. Glue into the mounting bore hole ISO H6
(see to conc. page for bonding agent)

2. If possible, avoid press fit, because the
internal diameter will decrease.

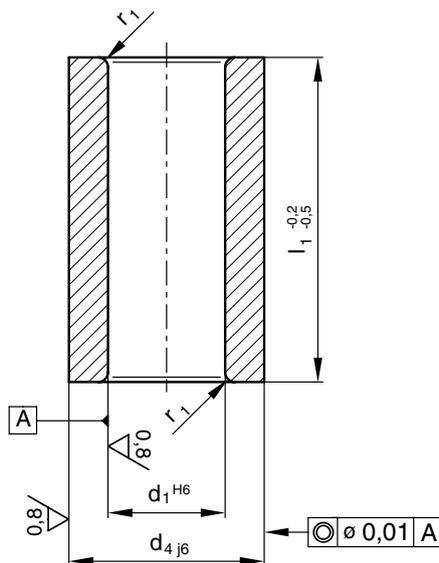

Order example: Guide bush **ST 9831**

$d_1 = 25$, $l_1 = 37$ mm

Add **25 x 037**

Order number **ST 9831.25 x 037**

Ball cages ST 7170

made of aluminium, with installation assistance

STEINEL[®]
NORMALIEN

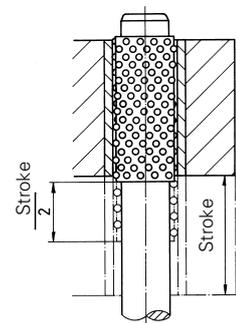

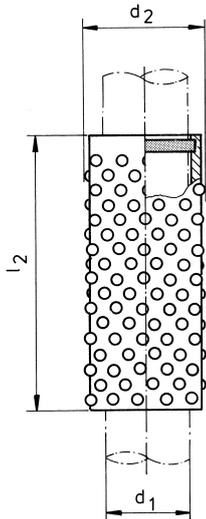

Material: ball cage made of aluminium balls of steel, hardened, grade 1, sorted

The balls in the cage holes are free-wheeling wedges. They are helically arranged in the axial direction, so that each ball has its own race.

The installation assistance in the ball cage makes the assembly of the die sets within multiple guiding units simpler.

Aluminium ball cages are universally utilizable. They have a high mechanical endurance, as well as excellent sliding characteristics, a high resistance to abrasion and great stability. Due to their optimum heat stability, they are suitable for use in temperatures of over 80 °C.

Extremely robust construction, utilizable in machines and tools with extremely high precision demands.

Cage travel = 1/2 length of stroke

Matching guide pillars ST 7100, ST 7106, ST 7107, ST 7108, ST 7117, ST 7118, ST 7120, ST 7126, ST 7127, ST 7128, ST 7181/82 and to all ball guide bushes.

Ball cages ST 7171

made of aluminium, with safety ring

Material: ball cage made of aluminium balls of steel, hardened, grade 1, sorted

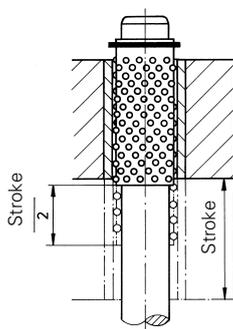

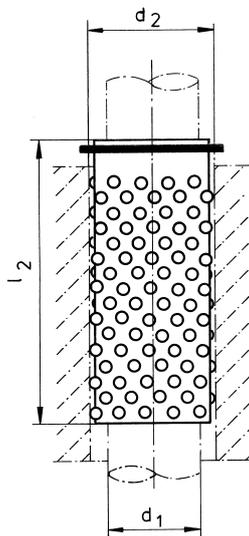

The balls in the cage holes are free-wheeling wedges. They are helically arranged in the axial direction, so that each ball has its own race.

The ball cages are constructed with a safety ring according to DIN 471.

Aluminium ball cages are universally utilizable. They have a high mechanical endurance, as well as excellent sliding characteristics, a high resistance to abrasion and great stability.

Due to their optimum heat stability, they are suitable for use in temperatures of over 80 °C.

Extremely robust construction, utilizable in machines and tools with extremely high precision demands.

Cage travel = 1/2 length of stroke

Roller cages ST 7140

made of aluminium

Material: Roller cage made of aluminium, profile rollers of steel, hardened, grade 1, sorted.

The profile rollers in the cage holes are free-wheeling wedged. Thus a protection against torsion is guaranteed. The rollers are helically arranged in the axial direction, so that each roller has its own race.

Extremely robust construction, universally adaptable.

Guide pillars and bushes:

Roller cage matching to guide pillars ST 7100, ST 7106, ST 7107, ST 7108, ST 7117, ST 7118, ST 7120, ST 7126, ST 7127, ST 7128 and to all ball guide bushes.

Additional guide diameters and lengths according to the ball cages ST 7130 are available upon request.

Ball cages ST 7150

made of brass

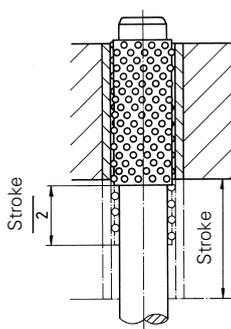

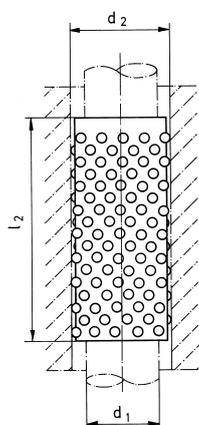

Material: ball cage made of brass, balls of steel, hardened, grade 1, sorted

The balls in the cage holes are free-wheeling wedges. They are helically arranged in the axial direction, so that each ball has its own race.

Ball cages made of brass are universally utilizable. They have a high mechanical strength, best antifriction properties as well as high abrasive resistance and stability.

Due to their optimum heat resistance they are suited for temperatures over 80 °C.

Sturdy workmanship usable in machines and tools with high precision demands.

Cage travel = ½ length of stroke

Sturdy workmanship, universally adaptable.

Matching guide pillars ST 7100, ST 7106, ST 7107, ST 7108, ST 7117, ST 7118, ST 7120, ST 7126, ST 7127, ST 7128, ST 7181/82 and to all ball guide bushes.

Ball cages ST 7152

made of brass, with safety ring

Material: ball cage made of brass, balls of steel, hardened, grade 1, sorted

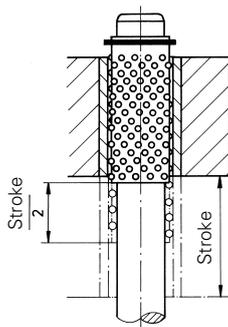

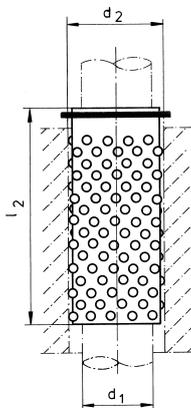

The balls in the cage holes are free-wheeling wedges. They are helically arranged in the axial direction, so that each ball has its own race.

The ball cages are constructed with a safety ring according to DIN 471.

Ball cages made of brass are universally utilizable. They have a high mechanical strength, best antifriction properties as well as high abrasive resistance and stability.

Due to their optimum heat resistance they are suited for temperatures over 80°C.

Sturdy workmanship, usable in machines and tools with high precision demands.

Cage travel = 1/2 length of stroke

Matching guide pillars ST 7100, ST 7106, ST 7107, ST 7108, ST 7117, ST 7118, ST 7120, ST 7126, ST 7127, ST 7128, ST 7181/82 as well as to all ball guide bushes.

Ball cages ST 7173

made of plastic with installation assistance

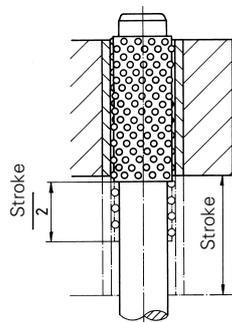

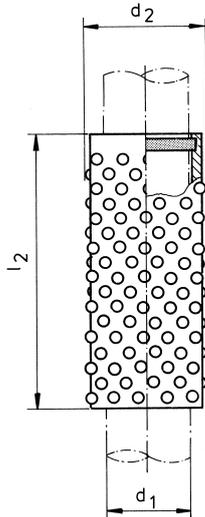

Material: Ball cage made of plastic, balls made of steel, hardened, grade 1, sorted.

The balls in the cage holes are free-wheeling wedged. They are helically arranged in the axial direction, so that each ball has its own race.

The installation assistance in the ball cage makes it easier to assemble the die set with multiple guide units.

Order example: Ball cage **ST 7173** made of plastic with installation assistance $d_1 = 16, l_2 = 54$ mm
Add **16 x 054**
Order number **ST 7173.16 x 054**

Cage travel = 1/2 length of stroke

Matching guide pillars ST 7100, ST 7106, ST 7107, ST 7108, ST 7117, ST 7118, ST 7120, ST 7126, ST 7127, ST 7128, ST 7181/82 as well as to all bushes using ball cages.

Matching guide pillars ST 7100, ST 7106, ST 7107, ST 7108, ST 7117, ST 7118, ST 7120, ST 7126, ST 7127, ST 7128, ST 7181/82 as well as to all guide bushes using ball cages.

Ball cages ST 7134

made of aluminium

Ball cage complete with holding safety device

Material: ball cage made of aluminium, balls of steel, hardened, grade 1, sorted

The balls in the cage holes are free-wheeling wedges. They are helically arranged in the axial direction, so that each ball has its own race. In the area of both longitudinal grooves as well as in the area of safety grooves the balls are eliminated. Sturdy workmanship, universally utilizable.

Application: In all die-sets where the guide pillars are fastened into the upper plate. The locking plate holds the ball cage and allows a complete retraction from the guide bush. Suitable especially to the guide pillars ST 7106 and ST 7108 and to all ball guide bushes.

Technical description: see page 3.04

Cage travel = 1/2 length of stroke

Example of application

Limiting sleeves ST 7135

Limiting sleeves

Material: Durethan

Limiting sleeves will be slipped over the guide pillars and clamped on. They prevent the shifting of the ball cage thereby facilitating the proper positioning of the ball cage during the assembly of the upper die block.

Cage holder ST 7132

Material: Steel

The cage holder can be used for all ball and roller cages. The lengths of the cage holder should be half the lengths of the cage in use. (If necessary please machine down.)

Application: In all die sets in which the guide posts are fastened in the upper part. The cage holder supports the ball cage and permits a complete removal from the guide bush.

Guide bushes ST 7319

smooth, sliding guide steel bronze plated

STEINEL®
NORMALIEN

Material: steel 1.3505 (100 Cr6)
hardened, hardness 61-63 HRC
sliding surface bronze plated

Guide diameter ISO H5, honed
mounting diameter ISO p6, ground

Important: Due to the galvanically applied bronze plating onto the hardened steel jacket, this bush is suitable especially for high sliding speeds and strong lateral forces.

Matching guide pillars: ST 7100,
ST 7106, ST 7107, ST 7108, ST 7117,
ST 7118, ST 7120, ST 7126, ST 7127,
ST 7128, ST 7181/82

Mounting instructions:

1. To glue into the mounting bore hole ISO E6 (Bonding agent see to corresponding page)
When gluing ensure that the oil distribution groove remains clear at the mounting diameter.
2. If possible avoid press fit, because the internal diameter will decrease.
3. Do not pour in because the oil distribution groove at the mounting diameter will be clogged.

Guide bushes ST 7411

smooth, to pour in, sliding guide steel bronze plated

DIN 9831/ISO 9448

Material: steel 1.3505 (100 Cr6) hardened, hardness 61-63 HRC sliding surface bronze plated

Guide diameter ISO H5, honed.
Mounting diameter machined with grooves for casting resin

Important: Due to the galvanically applied bronze plating onto the hardened steel jacket, this bush is suitable especially for high sliding speeds and strong lateral forces.

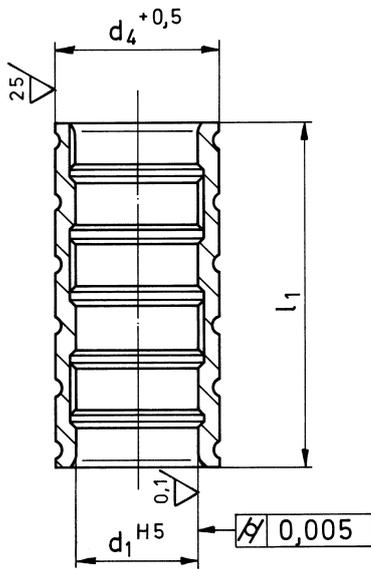

Matching Guide pillars: ST 7100, ST 7106, ST 7107, ST 7108, ST 7117, ST 7118, ST 7120, ST 7126, ST 7127, ST 7128, ST 7181/82

Mounting instructions: For lubricating reasons assemble guide bush ST 7411 vertically with the air groove upwards.

Mounting bore hole:
Provide $d_4 +1$ to $+4$ mm as casting gap.

Technical description: see page 3.04

Order example: Guide bush **ST 7411**
 $d_1 = 16$, $l_1 = 37$ mm
Add **16 x 037**

Guide bushes ST 7491

smooth, sliding guide with solid lubricant

Dimensions according to
DIN 9831/ISO 9448

Material:

Steel with insert of solid lubricant.
Due to the insert solid lubricant, this sliding guide is self-lubricating and is suited for higher loads.

Outside diameter ISO H6, precision turned
mounting diameter ISO j6, precision turned

Matching Guide pillars: ST 7100,
ST 7106, ST 7107, ST 7108, ST 7117,
ST 7118, ST 7120, ST 7126, ST 7127,
ST 7128, ST 7181/82

Mounting instructions:

1. Glue into the mounting bore hole ISO G6.
(Bonding agent see to corresponding page)
2. If possible avoid press fit, because the internal diameter will decrease.

Guide bushes ST 7404

smooth, ball guide brass

DIN 9831/ISO 9448

Material:

Guide bushes made of steel 1.3505 (100 Cr6) hardened, hardness 61-63 HRC
Ball cage made of brass, balls made of steel, hardened, grade 1, sorted

Guide diameter d_2 honed, suitable to ball cage and guide pillar.
Mounting diameter ISO j6, ground.

Important: If possible, order the complete ball guide, so that it can be matched with the correct fit.

Matching Guide pillars: ST 7100, ST 7106, ST 7107, ST 7108, ST 7117, ST 7118, ST 7120, ST 7126, ST 7127, ST 7128, ST 7181/82

Mounting instructions:

- To glue into the mounting bore hole ISO G6 (Bonding agent see to corresponding page)
- If possible, avoid press fit, because the internal diameter will decrease.

Guide bushes ST 7405

smooth, ball guide plastic

DIN 9831/ISO 9448

Material:

Guide bushes made of steel 1.3505 (100 Cr 6) hardened, hardness 61- 63 HRC
Ball cage made of plastic, balls made of steel, hardened, grade 1, sorted

Guide diameter d_2 honed, matched to ball cage and guide pillar.
Mounting diameter ground to ISO j6.

Important: If possible, order the complete ball guide so that it can be matched with the correct preload.

Matching guide pillars: ST 7100, ST 7106, ST 7107, ST 7108, ST 7117, ST 7118, ST 7120, ST 7126, ST 7127, ST 7128 und ST 7181/82.

Mounting instructions:

1. Glue into the bore hole ISO G6.
(Bonding agents under section 6)
2. If possible, avoid press fit, because the internal diameter will decrease.

Guide bushes ST 7412, ST 7416

with shoulder, ball guide aluminium

STEINEL[®]
NORMALIEN

Short version

DIN 9831/ISO 9448

Material:

Guide bushes made of steel 1.3505 (16 MnCr5), case hardened, hardness 61-63 HRC
Ball cage made of aluminium
balls made of steel, hardened, grade 1, sorted

Guide diameter honed, suitable to ball cage and guide pillar.
Mounting diameter ISO js4, ground.

Important:

If possible, order the complete ball guide, so that it can be matched with the correct fit.

Matching Guide pillars:

ST 7100, ST 7106, ST 7107, ST 7108, ST 7120, ST 7126, ST 7127, ST 7128 und ST 7181/82

Mounting instructions:

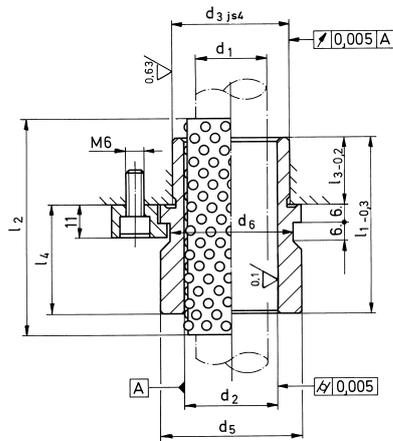

Fit in mounting bore hole ISO H6.
Fix with 3 holding clamps (included in delivery).
The shoulder surface, right-angled ground to the guide bore, will be squeezed onto the plate by the holding clamps and guarantees an absolutely rigid clamping of the guide bush.

Holding clamps:

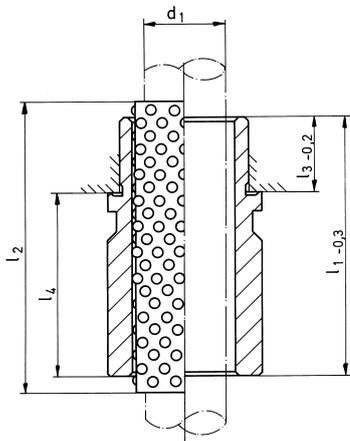

When reordering the holding clamps please order: 1 set = 3 pieces, order number ST 7367

Guide bush without ball cage ST 7416.
Ball cage only ST 7130.

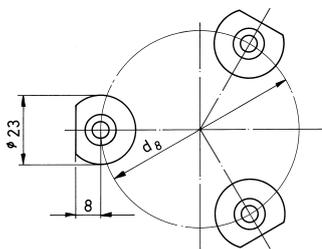

Technical description: see page 3.04

Guide bushes ST 7413

with shoulder, roller guide

Short version

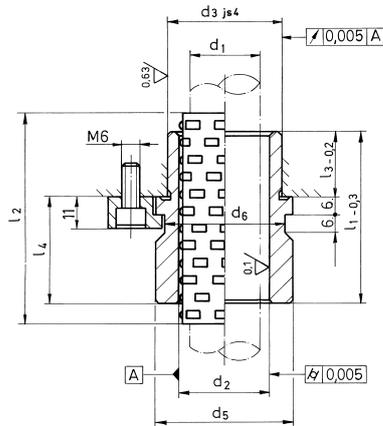

DIN 9831/ISO 9448

Material:

Guide bushes made of steel 1.7131 (16 MnCr5), case hardened, hardness 61-63 HRC
roller cage made of aluminium
profile rollers made of steel, hardened, grade 1, sorted

Guide diameter honed, suitable to roller cage and guide pillar.
Mounting diameter ISO js4, ground.

Important: If possible, order the complete roller guide, so that it can be matched with the correct fit.

Mid-length version

Matching Guide pillars:

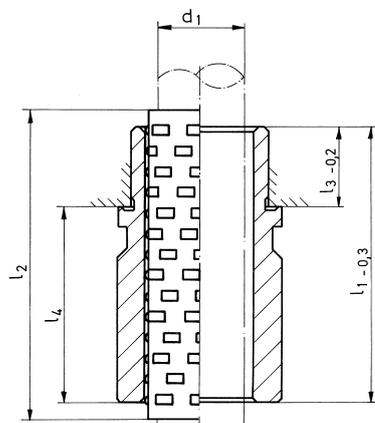

ST 7100, ST 7106, ST 7107, ST 7108, ST 7120, ST 7126, ST 7127, ST 7128 und ST 7181/82

Mounting instructions:

Fit in mounting bore hole ISO H6.
Fix with 3 holding clamps ST 7367 (included in delivery).
The shoulder surface, right-angled ground to the guide bore, will be squeezed onto the plate by the holding clamps and guarantees an absolutely rigid clamping of the guide bush.

Holding clamps:

When reordering the holding clamps please order: 1 set = 3 pieces, order number ST 7367

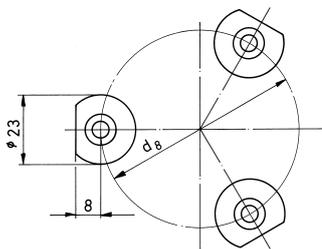

Long version

Cage travel = 1/2 length of stroke

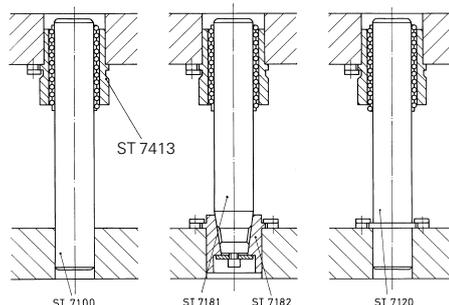

Guide bush without roller cage ST 7416.
Roller cage only ST 7140.

Technical description: see page 3.04

Guide bushes ST 7415

with shoulder, ball guide plastic

STEINEL®
NORMALIEN

Short version

DIN 9831/ISO 9448

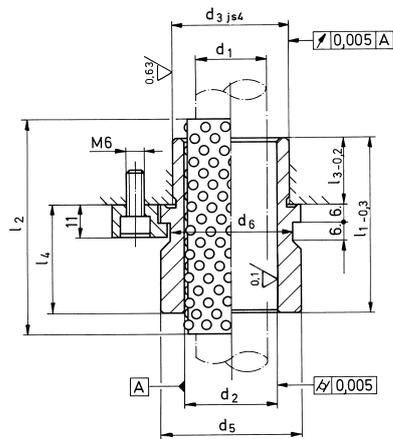

Material:

Guide bushes made of steel 1.7131 (16MnCr5), case hardened, hardness 61-63 HRC.
Ball cage made of plastic.
Balls made of steel, hardened, grade 1, sorted.

Guide diameter honed, matched to ball cage and guide pillar.
Mounting diameter ground ISO js4.

Important:

If possible, order the complete ball guide so that it can be matched with the correct preload.

Mid-length version

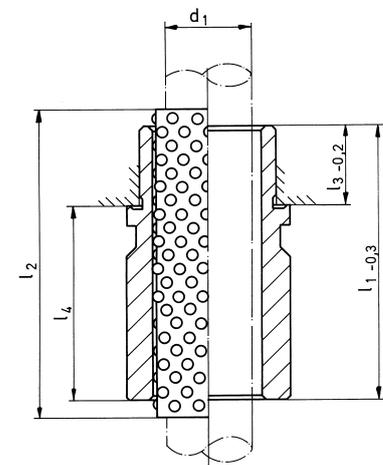

Matching guide pillars: ST 7100, ST 7106, ST 7107, ST 7108, ST 7120, ST 7126, ST 7127, ST 7128 und ST 7181/82

Mounting instructions:

Fit in mounting bore hole to ISO H6.
Fasten with 3 clamps ST 7367, (included in delivery).
The shoulder surface is right-angled ground to the guide bore and pressed into the base plate. It is held by the clamps, which provide a rigid mounting of the guide bush.

Holding Clamps:

When reordering the Holding clamps, please order: 1 set = 3 pieces per guide bush, order number ST 7367

Guide bushes ST 7419

with shoulder, sliding guide steel bronze plated

STEINEL®
NORMALIEN

Short version

DIN 9831/ISO 9448

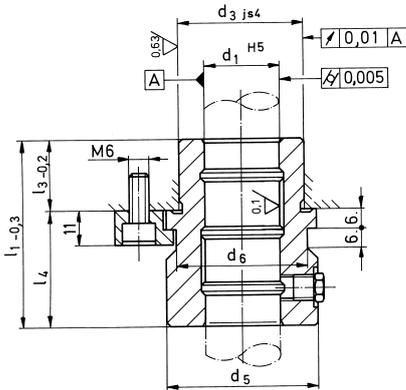

Material:

Guide bush made of steel 1.7131 (16 MnCr5), case hardened, hardness 61-63 HRC, sliding surface bronze plated.

Guide diameter ISO H5 honed. Mounting diameter ISO js4, ground.

Important:

Due to the galvanically applied bronze plating onto the hardened steel jacket, this bush is suitable especially for high sliding speeds and strong lateral forces.

Mid-length version

Lubrication:

Lubrication by funnel grease nipple, connection M 8 x 1 provided for central lubrication.

Matching Guide pillars:

ST 7100, ST 7106, ST 7107, ST 7108, ST 7120, ST 7126, ST 7127, ST 7128 and ST 7181/82

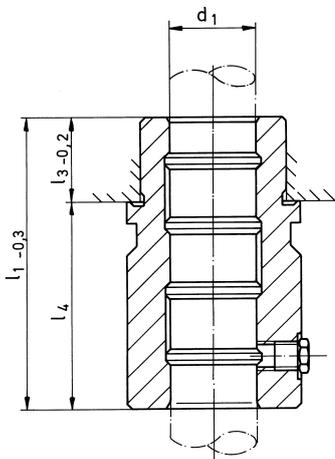

Mounting instructions:

Fit in mounting bore hole ISO H6. Fix with 3 holding clamps ST 7367 (included in delivery). The shoulder surface, right-angled ground to the guide bore, will be squeezed onto the plate by the holding clamps and guarantees an absolutely rigid clamping of the guide bush.

Guide bushes ST 7471

with shoulder, sliding guide with solid lubricant

Short version

Dimensions according to
DIN 9831/ISO 9448

Material:

Steel with insert of solid lubricant.
Due to the solid lubricant inserts, the sliding guide is self-lubricating and is suited for higher loads.

Guide diameter ISO H6, precision turned.
Mounting diameter ISO js4, precision turned.

Lubrication:

The solid lubricant greasing will be described as a lubricating status by which solid lubricant particles, which have a low shearing resistance within their crystal structure, are available between two surfaces and taking over the lubricating functions.

Matching Guide pillars:

ST 7100, ST 7106, ST 7107, ST 7108,
ST 7120, ST 7126, ST 7127, ST 7128 and

Guide bushes ST 7431

with shoulder, sliding guide with solid lubricant

STEINEL[®]
NORMALIEN

Short version

DIN 9831/ISO 9448

Material:

Bronze with solid lubricant bands.
Due to the solid lubricant bands, the sliding guide is self-lubricating and suitable for higher loads.

Guide diameter ISO H6, precision turned
Mounting diameter ISO j6, precision turned

Lubrication:

In the solid lubricant construction, the particles of the solid lubricant have a low shearing resistance in their crystalline structure. They are between two surfaces and take over the lubricating function.

Matching Guide pillars:

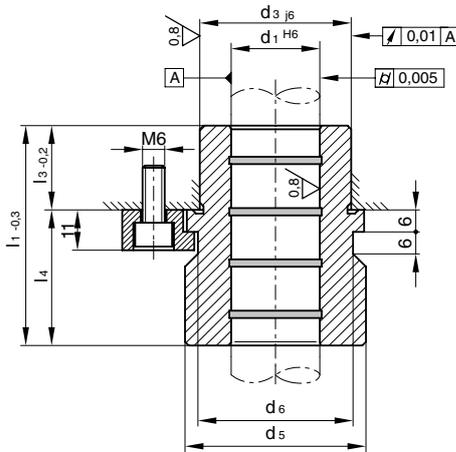

ST 7100, ST 7106, ST 7107, ST 7108,
ST 7120, ST 7126, ST 7127, ST 7128 and
ST 7181/82

Mounting instructions:

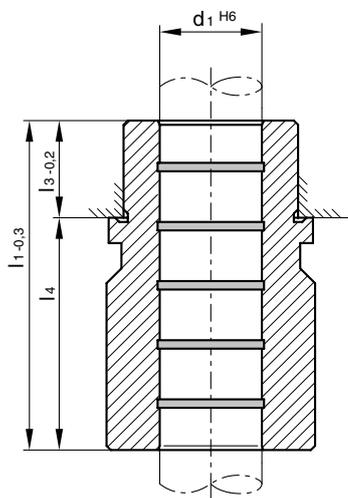

Fit in mounting bore hole to ISO H6.
Fasten with 3 clamps ST 7367, included in delivery. The shoulder surface is right-angled ground to the guide bore and pressed into the base plate. It is held by the clamps, which provide a rigid mounting of the guide bush.

Holding clamps:

When reordering the holding clamps, please order: 1 set = 3 pieces per guide bush, order number ST 7367

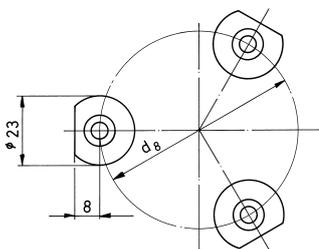

Mid-length version

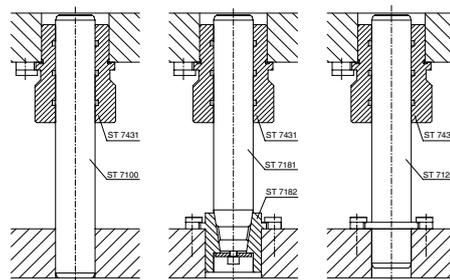

Long version

Technical description: see page 3.04

Guide bushes ST 7422, ST 7426

with flange, ball guide aluminium

Short version

DIN 9831/ISO 9448

Material:

Guide bush made of steel 1.7131
(16 MnCr5) case hardened, hardness 61- 63 HRC.

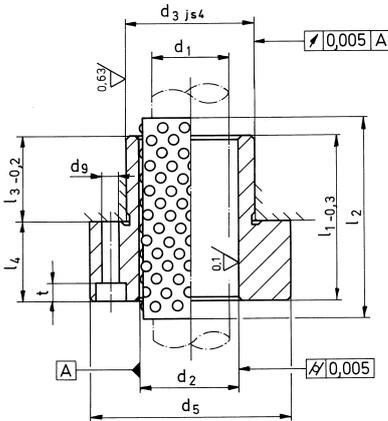

Ball cage made of aluminium, balls made of steel, hardened, grade 1, sorted.

Guide diameter d_2 honed, suitable to ball cage and guide pillar.

Mounting diameter ISO js4, ground.

Important:

If possible, order the complete ball guide, so that it can be matched with the correct fit

Mid-length version

Matching guide pillars:

ST 7100, ST 7106, ST 7107, ST 7108,
ST 7120, ST 7126, ST 7127, ST 7128 and
ST 7181/82

Mounting instructions:

Fit in mounting bore hole ISO H6.

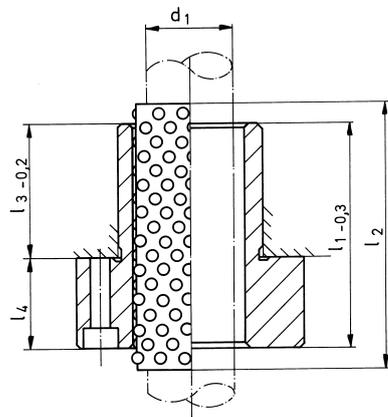

Fix with 3 cheese-head screws

The flange surface, right-angled ground to the guide bore, will be squeezed onto the plate by the screws and guarantees an absolutely rigid clamping of the guide bush.

Guide bushes ST 7425, ST 7426

with flange, ball guide plastic

Short version

DIN 9831/ISO 9448

Material:

Guide bushes made of steel 1.7131 (16 Mn Cr5) case hardened, hardness 61- 63 HRC.
Ball cage made of plastic, balls made of steel, hardened, grade 1, sorted.

Guide diameter honed, matched to ball cage and guide pillar.
Mounting diameter ground to ISO js4.

Important:

If possible, order the complete ball guide so that it can be matched with the correct preload.

Matching guide pillars:

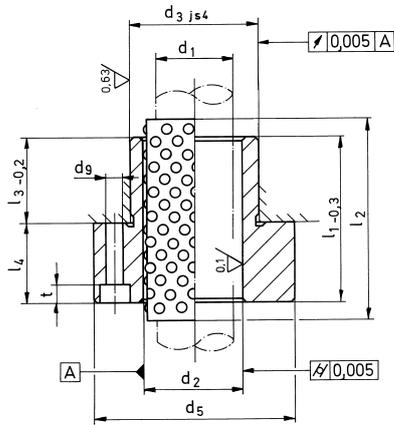

ST 7100, ST 7106, ST 7107, ST 7108, ST 7120, ST 7126, ST 7127, ST 7128 and ST 7181/82

Mounting instructions:

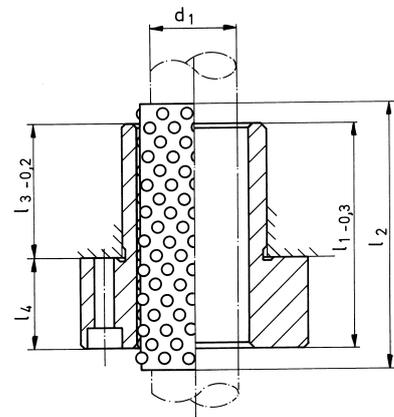

Fit in mounting bore hole to ISO H6.
Fasten with 3 socket-head cap screws.
The shoulder surface is right-angled ground to the guide bore and pressed into the base plate. It is held by the clamps, which provide a rigid mounting of the guide bush.

Guide bushes without ball cage ST 7426
Ball cage only ST 7133

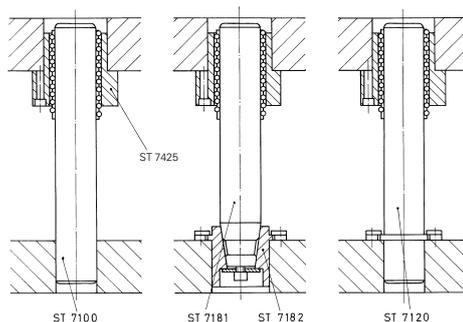

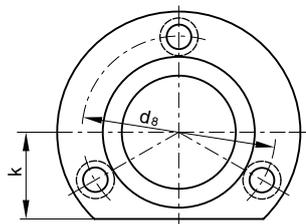

Technical description: see page 3.04

Mid-length version

Long version
Cage travel = 1/2 length of stroke

Guide bushes ST 7429

with flange, sliding guide steel bronze plated

STEINEL®
NORMALIEN

Short version

DIN 9831/ISO 9448

Material: steel 1.7131 (16 Mn Cr5)
case hardened,
hardness 61-63 HRC
sliding surface bronze plated

Guide diameter ISO H5, honed
mounting diameter ISO js4, ground.

Important:

Due to the galvanically applied bronze plating onto the hardened steel jacket, this bush is suitable especially for high sliding speeds and strong lateral forces.

Lubrication:

Lubrication by funnel grease nipple
Connection M 8 x 1 provided for central lubrication.

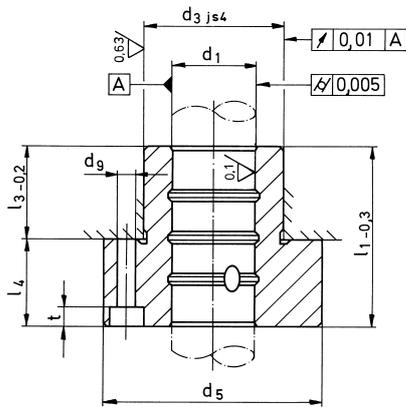

Matching Guide pillars:

ST 7100, ST 7106, ST 7107, ST 7108,
ST 7120, ST 7126, ST 7127, ST 7128 and
ST 7181/82

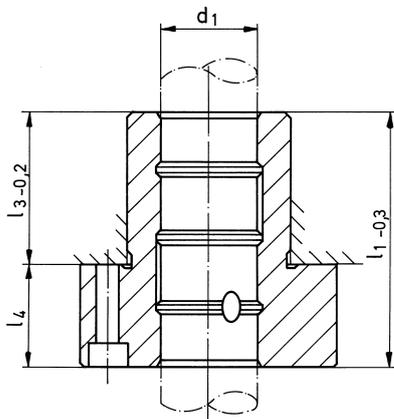

Mounting instructions:

Fit in mounting bore hole ISO H6.
Fix with 3 cheese-head screws.
The flange surface, right-angled ground to the guide bore, will be squeezed onto the plate by the screws clamps and guarantees an absolutely rigid clamping of the guide bush.

At dia. 15 and 16 the bore hole for lubrication is at the shank d3.

Guide bushes ST 7481

with flange, sliding guide with solid lubricant

Short version

Dimensions according to
DIN 9831/ISO 9448

Material:

Steel with insert of solid lubricant.
Due to the solid lubricant inserts, the sliding guide is self-lubricating and is suited for higher loads.

Guide diameter ISO H6, precision turned.
Mounting diameter ISO js4, precision turned.

Lubrication:

The solid lubricant greasing will be described as a lubricating status by which solid lubricant particles, which have a low shearing resistance within their crystal structure, are available between two surfaces and taking over the lubricating functions.

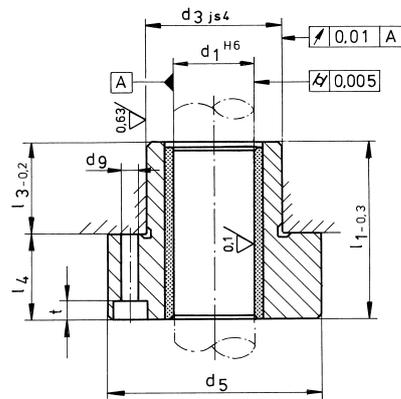

Matching Guide pillars:

ST 7100, ST 7106, ST 7107, ST 7108,
ST 7120, ST 7126, ST 7127, ST 7128 and
ST 7181/82

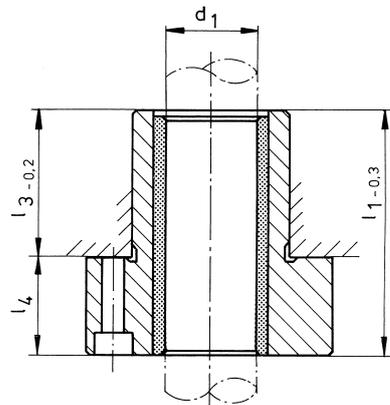

Mounting instructions:

Fit in mounting bore hole ISO H6.
Fix with 3 cheese-head screws.
The flange surface, right-angled ground to the guide bore, will be squeezed onto the plate by the screws clamps and guarantees an absolutely rigid clamping of the guide bush.

Guide bushes ST 7441

with flange, sliding guide with solid lubricant

Short version

Dimensions according to
DIN 9831/ISO 9448

Material:

Bronze with solid lubricant bands.
Due to the solid lubricant bands, the sliding guide is self-lubricating and suitable for higher loads.

Guide diameter ISO H6, precision turned.
Mounting diameter ISO j6, precision turned.

Lubrication:

In the solid lubricant construction, the particles of the solid lubricant have a low shearing resistance in their crystalline structure. They are between two surfaces and take over the lubricating function.

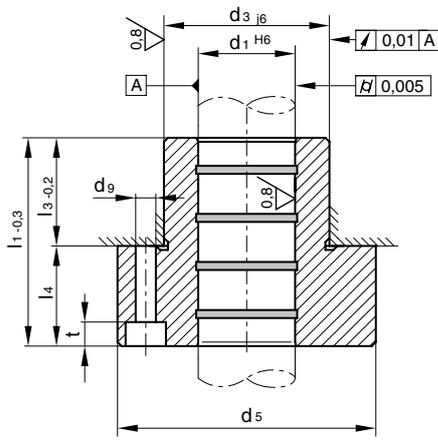

Matching guide pillars:

ST 7100, ST 7106, ST 7107, ST 7108,
ST 7120, ST 7126, ST 7127, ST 7128 and
ST 7181/82

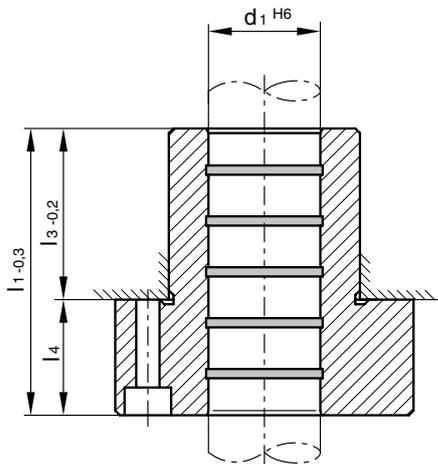

Mounting instructions:

Fit in mounting bore hole to ISO H6.
Fasten with 3 socket-head cap screws.
The shoulder surface is right-angled ground to the guide bore and pressed into the base plate. It is held by the clamps, which provide a rigid mounting of the guide bush.

Suitable hexagon socket screws DIN 912

Order number **SZ 8510.12 x 025**

Order example: guide plate **ST 7571**

Size $b_1 \times l_1 = 80 \times 125$

Add **080 x 125**

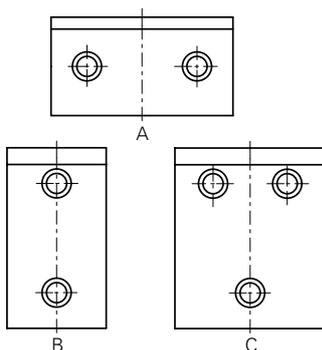

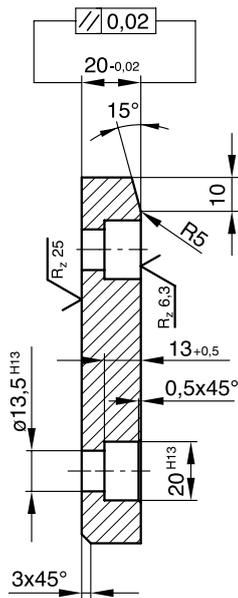

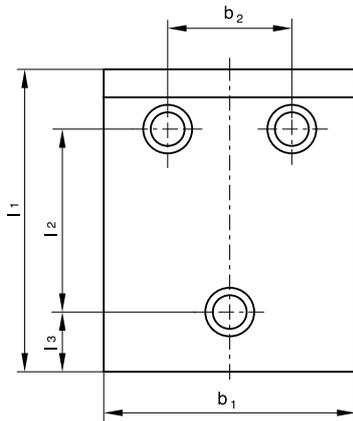

Order number **ST 7571.080 x 125**

Function:

Guide plates will preferably be used when moving within the limits of mixed friction or solidstate friction, that means, with very low sliding speeds and high specific surface pressures.

They are insensible against impacts and pushes and have very good wearing properties.

Due to the integrate solid lubricant inserts the sliding guide is self-lubricating and for that reason without maintenance.

Guide plates ST 7561

with solid lubricant

STEINEL®
NORMALIEN

ISO 9183

Material: Bronze with solid lubricant

Attachement

Suitable hexagon socket screws DIN 912

Order number **SZ 8510.12 x 025**

Order example: guide plate **ST 7561**

Size $b_1 \times l_1 \times t = 80 \times 125 \times 20$

Add **080 x 125 x 20**

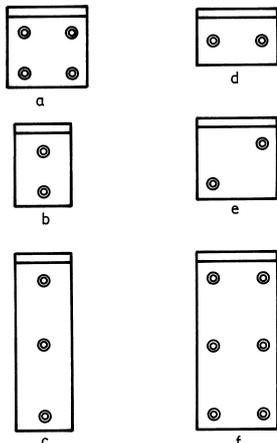

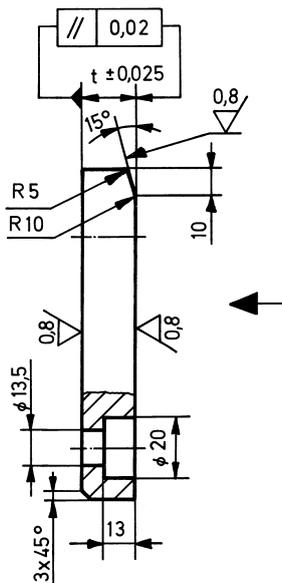

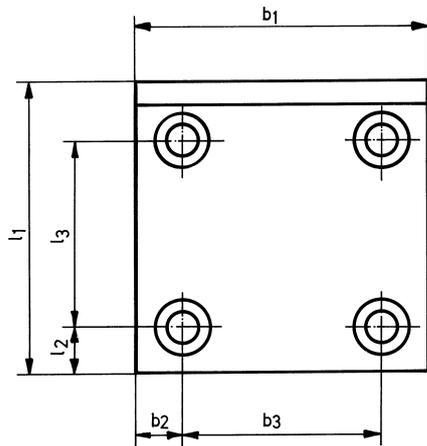

Order number **ST 7561.080 x 125 x 20**

Function:

Guide plates will preferably be used when moving within the limits of mixed friction or solidstate friction, that means, with very low sliding speeds and high specific surface pressures.

They are insensible against impacts and pushes and have very good wearing properties.

Due to the integrate solid lubricant inserts the sliding guide is self-lubricating and for that reason without maintenance.
